Abu Kawser

AI Automation Engineer • Backend & Systems Engineer
Dhaka, Bangladesh | +880 1315 267528 | kawserabu11mini@gmail.com
GitHub | Portfolio | LinkedIn

Targeted Summary

Final-year CSE student at the University of Dhaka building AI agents and the automation around them. Built and deployed GrowPilot, a TypeScript/Express workbench that scrapes and cleans prospect pages, gates leads with deterministic ICP scoring, generates grounded outbound copy, answers cached FAQs, qualifies leads, books appointments and reports token cost. Hands-on with Gemini, Groq, Cerebras and Ollama APIs, n8n webhooks, Docker Compose, Linux and AI-assisted development. Available for remote work and Dhaka office work after the remote period.

Role-Matched Skills

AI agents	Gemini API, Groq, Cerebras, Ollama/Llama 3.2 3B, prompt design, model routing, retries, fallbacks, conversation windows, prompt-injection screening, groundedness verification
Automation	n8n Webhook → Code → Respond workflow, REST APIs, JSON, webhooks, CRM/Google Sheets delivery contract, FAQ caching, calendar-booking logic
GTM engineering	URL fetching, HTML boilerplate stripping, ICP scoring, lead qualification, grounded personalization, outbound email/WhatsApp copy, CSV export
Engineering	TypeScript, JavaScript, Python, Go, Express, FastAPI, PostgreSQL/pgvector, MongoDB, Redis, REST, SSE, testing and validation
Deployment	Ubuntu (primary OS since 2022), Docker, Docker Compose, Linux, Vercel, Render, Azure, GitHub Actions; also Kali, Linux Mint and Xubuntu in dual-boot/VM environments
AI tools	Claude Code, Codex, Qoder (Qwen 3.8 Flash), Cursor and Freebuff (GLM 5.3); comfortable using AI coding tools to ship and debug faster
Additional	Flutter/Dart, Firebase, Supabase, Next.js, React, PWA, WhatsApp Business integration concepts, English and Bengali

Selected Work

GrowPilot — Cost-Aware GTM and Customer Automation GitHub | GTM demo | Agent demo
TypeScript, React, Express, Gemini API, Ollama, Docker Compose, n8n

- Built a live GTM pipeline: fetch a prospect URL, strip scripts/styles/navigation/footer content, estimate token savings, score ICP fit and stop low-fit leads before generation.
- Built a 24/7 FAQ and qualification agent with a zero-token normalized cache, budget extraction, bounded six-turn memory, booking decisions, CRM records and n8n webhook delivery.
- Added a five-layer groundedness gate for entity attribution, numeric claims, extracted facts, unsupported-claim filtering and prompt-injection safety; added retry/backoff, model fallback, cost metering and private-IP blocking.
- Shipped Docker Compose for the agent, Ollama and n8n, plus a Vercel deployment. The repository includes a ready-to-import n8n Webhook/Code/Respond workflow.

CareerPilot — AI Job Matching and CV Generation GitHub
Python, Groq, Gemini, SQLite, BM25, Pydantic, pytest, mypy, ruff, GitHub Actions

- Collects public ATS postings, extracts requirements, scores fit by location and skills, and generates grounded CV and cover-letter drafts with recorded CI evaluations.

CSEDU Digital Knowledge Platform — RAG Assistant GitHub
Next.js, React, Go/chi, FastAPI, PostgreSQL/pgvector, Redis, MinIO, Docker, Azure

- Built hybrid vector plus PostgreSQL full-text retrieval, cited SSE answers, Groq primary/Gemini fallback, prompt-injection screening, RBAC and audit logging.

LearnLoop — Flutter Skill-Sharing App GitHub
Flutter/Dart, Firebase

- Team-built mobile app with courses, progress tracking, chat, communities and gamified quizzes; contributed authentication and core screens.

Experience and Achievements

Contributor, Eventify BD — technology-event discovery platform.
Academic Team Member, Bangladesh Mathematical Olympiad — Dec 2022–Jul 2024.
Finalist/top-ranked participant across 2024–2026 hackathons, datathons and CTFs, including 5th place at July Hackathon 2026 and 9th place at BUP CTF 2026.

Education

B.Sc. in CSE, University of Dhaka 2022–Present
Final-year undergraduate, 2nd semester. HSC, Notre Dame College (GPA 5.00/5.00); SSC, Cantonment Public School and College, Rangpur (GPA 5.00/5.00).

Availability

Own laptop and stable internet for the remote period. Comfortable working within the advertised 10am–10pm window, relocating to the Dhaka office after the remote period, and completing the paid 48-hour n8n + LLM test task.
